Red Lion Controls Launches New Generation of HMIs

York, Pa. – September 26, 2017 – Red Lion Controls announced the CR1000 and CR3000 , its newest generation of Human Machine Interfaces (HMIs). Both products employ new Crimson® 3.1 software to provide more engaging interfaces with advanced design capabilities in addition to protocol conversion, data logging and web server for remote monitoring and control.

Control & Expansion Options On a Rugged Graphite Platform

New offerings combine communication and control capabilities to reduce cost and complexity. Last week Red Lion announced its rugged Graphite® platform has been expanded to include a new Graphite Core Controller and Graphite Crimson® Control Module that combine communication and control capabilities to reduce cost and ease operations. Both hardware offerings leverage an enhanced version of Red Lion's powerful Crimson 3.0 software with added Crimson Control functionality to provide a single programming solution for control, networking and data visualization.

Network More! N-Tron Series Industrial Networking Products

N-Tron® series Ethernet switches, industrial Wi-Fi radios and communication converter products have joined the Red Lion portfolio. These products address a wide range of industrial requirements. From the plant floor to remote sites, N-Tron networking products are designed to operate reliably in your harsh environments.

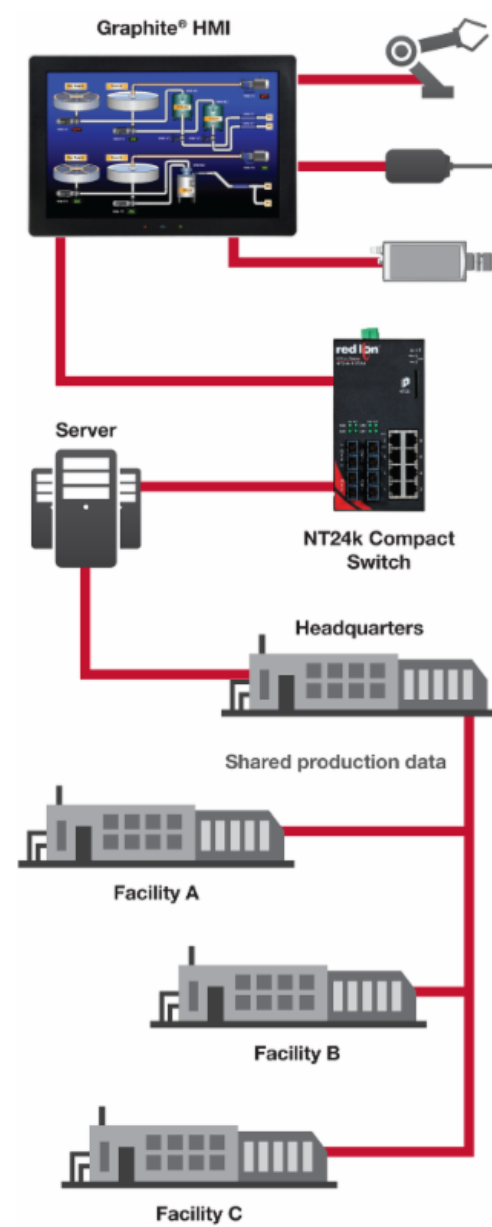

Products we cover include:

- Unmanaged Ethernet Switches
- Managed Ethernet Switches
- Monitored Ethernet Switches
- Power over Ethernet (PoE)
- Media Converters
- Serial Converters
- IP67 and OEM Boards
- Wi-Fi Radios

Flexible, reliable network connectivity is vital for industrial operations. That's why Red Lion's N-Tron® series NT24k all-Gigabit managed switches provide the gold standard for industrial networking. Designed to maximize media options, network speed and switch management, our rugged NT24k platform meets and exceeds industrial networking requirements to enable

customers to do MORE across Industrial Internet of Things (IIoT) applications that include factory automation, alternative energy, power, utilities, transportation and oil and gas.
